Mines and Prospects--Furnaces and Mills

Piling Up Stakes in Bingham Canyon

The Jiggers Along the Old Channel All Making Wages, Some of Them Big Wads of Money.

While the new devices employed in the concentration of Bingham cres are doing their work with an Integrity closely approximating the record, the "jigger" who has been making wages, if not a stake, each year along the main canyon continues in evidence, the output of his unpretentious plant not by any means to be despised. At present, said John Brooks, who was among those to pioneer the industry, there are four or five of these plants in the canyon, and some of them will have netted the owners several thousand dollars for the season. In spots, said he, the "picking" compares favorably with that of early days. Johnny Rogwith that of early days. Johnny Rogers, who has long been identified with the work, is piling up good money this season, according to Mr. Brooks, and as long as the ores of the great camp of copper continue to slime, so long will the jigs be profitably operated in the canyon, although the percentage of ore recovered in the mills is greater than ever before. In the channel are tailings in which are yet contained a large volume of wealth and it will continue to be fed as long as a concentrator is employed at the camp.

Mr. Brooks is in receipt of a propo-

Mr. Brooks is in receipt of a proposition that probably will induce him to go to Canada and take charge of a stamp mill which is being profitably operated by the Lucinda Gold Mining company, north of Sault Ste. Marie, Mich. Upon his acquisition the company is to be congratulated. He has had much experience in the milling of cres, and at Bingham has established a record that compares with, if it does a record that compares with, if it does not exceed, the best.

TAPPED WATER COURSE.

Appearance of Ore in Albion Followed by Flow of Aqua Pura.

Following the disclosure of ore in the face of the Albion's long tunnel at Alta on Tuesday night was a flow of water that drove the miners from It and that kept them out all yesterday. The heavy flow of this element convinces Manager Hatfield that connection with at least one of the main orebearing channels is about to be made bearing channels is about to be made along the lines expected, although it is a little early in the work. In this event Manager Hatheld hopes to be able to return to the ore-bodies in the upper workings, from which he was driven by water, and to begin the stoping of ore again before the close of the season. News from the property is awaited with much interest.

HALIFAX IS UNWATERED.

Sinking to Be Resumed on Salt Lake Interests at Tonopah.

The shaft on the Halifax mine, owned by Messre Keith and Kearns of Salt Lake, has now been unwatered, says the Bonanza of Tonopah, and sinking will shortly be resumed to the 800-foot level, and crosscutting from this point will be started very soon. The water contract with the Crystal Water company ereafter receive the income derived from this source.

There is much speculation in Tonopah as to whether a dividend will be de-clared by the Montana-Tonopah, 'the annual meetings of whose shareholders scheduled for next Monday in Salt

The Tonopah-Utica is a Salt Lake corporation owning three claims at Liberty, from which surface assays were obtained as high as \$227 per ton in gold and silver. Charles Maunder, the general manager, has received instructions to commence development work and surveys will also be made for a Donald B. Gillies, formerly identified

with mines at Tintic, is at the Re-veille mine, Nevada, owned by Thomas J Lynch and others, and of which he is making an examination

BINGHAM'S HIGH-GRADE

Excellent Quality of Ore From New

Strike in the Dalton. The initial lot of high-grade ore from

the latest development in the Bingham Con's Dalton shaft was yesterday marketed on controls revealing as much as 127 ounces silver, 19 per cent lead and 90 cents gold, with approximately 2 per cent copper per ton. On the resources at that territory the consignment af-fords a most gratifying lesson and while the extent of this class of ore has not been defined, it continues to reach the surface with a steady tonnage of sec-ond-class from the same ledge Indeed the earnings from that source now con-

THE DAY ON 'CHANGE.

Eagle & Blue Bell Reappears, With Some Trading in Mercur.

The day on the mining exchange closed on the sale of 19,650 shares of stock for \$2,763.63, and with the market, perhaps, a little firmer. Eagle & Blue Bell, so long neglected, came out to a bid of 75 cents, while Montana of Tonopah found a cuswhile Montana of Tonopah found a customer for its shares at \$1.85. with the Judge again up to \$1.60 notwithstanding the fact that its plant continues idle. Con Mercur showed some activity, and while orders for 1600 were being executed, moved creeplly up to 20% cents with Tetro changing hands around 28 and Star Con. at 14 cents. Daily, on a report that work at the Masspa shart had been suspended, sold down to \$2.25, while Daly-West was held at \$14.50 and the King at \$3.4. Boston Con. was firm at \$7.50 asked and United States at \$21.50, and while \$2.10 was the best to be had for Grand Central, the market was not distressed by anything that was poked at it from that source. Horn Silver was firm with \$1.40 bld for it, while Buillon-Beck was an offering at \$1.60 and Mammoth at \$1.55, the day closing on the following market:

surface with a steady tonnage of second-class from the same ledge. Indeed the earnings from that source now constitute quite a respectable unit. Manager MacVichie, who came in from camp last night, is very much pleased with conditions at the company's Bingham system of mines, each of which is capable of a larger tonnage when the smelter shall require it.

Con. Mercur Report.

The weekly report by Manager George Dern of the Con. Mercur which reached the local offices yesterday indicates a condition at the mines and mill that is quite encouraging. The mill is now reducing an average of 600 tons of gold-bearing ore daily, the headings maintaining an average which is quite satisfactory while the ore bodies are fully up to the normal.

Senator A. B. Lewis Back at His Desk

Progress Reported in the Exploitation of Monarch Interests, With Results Now Assured.

After an absence of several months in he East, during which period his talnts have been applied to other underakings by which the mining interests f this State must be benefited, Hon. A. Lewis, president of the Monarch dining company, returned to his offices town yesterday prepared to remain t least a month. Of the work in bealf of the Monarch, President Lewis ays that while progress has been made, e is not at this time at liberty to go nto details. While conditions in the last have not been such as to encourge many in the exploitation of new rojects, said Mr. Lewis, there is yet nuch interest manifested in opportuni-ies held out to it by Utah. Certainly is active list of eyocks in the Eastern market has held up as have few secur-ites, their dividends have been regular nd the attitude of the investor toward nem is a most favorable one. It was eported in the East before he left that e opening up of new terrirtoy in the fajestic company's domain out of Mil-ord, Beaver county, has been char-cterized by important disclosures in ne Old Hickory group and O. K., but e had not found time in which to erify it. However, the shareholders have been waiting on just such devel-opments as they have the assurance of much expert talent that good results, with further development, are to be re-

Senator Lewis reports that Col. Joseph Henshaw, secretary of the comwill leave for home again next week

GLASGOW'S INTERESTS

Management Now Preparing for Active Campaign at Mines.

At the properties of the Glasgow & Western Mining company in Nevada, preparations are now in progress for work at greater depth underground, as well as for the additional equipment of the smelter at Golconda. At the Star group contracts are about to be let to drop the main shaft to a depth of 1000 feet, the shaft having already reached the 700-foot level, and along which a large amount of good ore 19 exposed. Meanwhile, the main tunnel is being equipped with rail, of which over 1800 feet will be spiked, rail connection to be

nade with all the various channels.

At the Adlaide group, in which very large volumes of copper-bearing ore have already been exposed, the force has been increased with the resources of the territory on the north to be opened at once, while at Copper canyon and Copper basin, said Col. Joseph Farren, who came in from the company's camp yesterday, additional miners will be put on the last of the month and much new ground opened there. At the company's smelter, Golconda, the buttery of Blake separators, which device has been tried out with most satisfactory results, is to be increased, and in a short time mines and plant will be again running at their maximum. Superintendent Farren is very much pleased with conditions at the various properties and promises that there shall be no lack of ore with which to keep the furnaces in continuous operation. Manager Stalmann is now in San Francisco taking part in the festivities and the reception to the Knights Templars.

NEW TABLES ON GROUND.

Two More Machines for Further Equipment of Ohio Mill.

Superintendent Ziegler of the Ohio Copper company's plant and properties at Bingham and who was at the general offices during the day, reports the two additional tables for the concentrator now on the ground, with the ma-chines to be installed in the next few hours. The pump has now been estab-lished at the bottom of the main incline lished at the bottom of the main incline and from the 309-foot station drifting on the ledge will begin at once. At the bottom of the incline there is now ex-posed fourteen feat of ore. Of this three feet is of shipping quality and better than any of corresponding amount hitherto opened up on the prop-erty, the remainder an ideal milling ore. Accompanied by Manager Catrow. Superintendent Ziegler will depart for camp again this morning. camp again this morning

ROAD TO TONOPAH

Scon to Be in Condition to Increase Shipments to Salt Lake.

A camp publication telling of the condition of the Tonopah railroad says: A careful examination of the track between Goldfield Junction and McLean's since the water has receded discloses a condition much worse than was anticipated. A large forces of additional men was put to work this morning and the resident engineer advises that track can be repaired and trains running into Tonopah by Tuesday night or Wednesday morning. In order to facilitate movement of mail and passengers, the railroad company, in conjunction with O'Keefe, has inaugurated stage service between Tonopah and Deep Wells. Trains are being operated between Deep Wells and Sodaville. By this means mall and passengers are being handled with but few hours' delay. Goldfield Junction and McLean's since the

Royal Bread is pure, every loaf bears grocers and first-class restaurants.

Mammoth Group to Have a Smelter

The Holden Syndicate's Latest Acquisition to Be Promptly Equipped With Pyritic Furnaces.

As soon as it is possible to accomplish it, the Mammoth group of copper, gold and silver-bearing mines on "the great sulphide belt," Shasta county, Cal., and for which Bert Holden of this city and Boston associates recently shelled out half a million dollars, is to be equipped with an up-to-date smelter. To this end George K. Fischer, whose skill as a mechanical engineer and smelter-builder is reflected in so many plants in the country. country, was yesterday instructed by Mr. Holden, who is managing the proposition in the far West, to proceed with plans, the breaking of ground at camp to follow. In the Mammoth group, which has as neighbors the Copper Mountain, by which 20,000,000. group, which has as neighbors the Cop-per Mountain, by which 30,000,000 pounds of buillon was produced in 1903, and the Balakiala, controlled by the Western Exploration company of Utah, is exposed, said Mr. Holden yesterday, about 300,000 tons of ore that will main-tain an average of 5 per cent copper with gold and silver of the value of \$2 per ton. The ore is an ideal pyrite, similar to that which occurs at Bing-ham and capable of reduction equally ham and capable of reduction equally as economic. Without discrediting the bonanzas of Blingham, with which he has been identified since boyhood. Mr. Holden says of his syndicate's acquisition that it is one of the biggest of which there is a syndicate of the biggest. which they have taken hold, the out-put of its furnaces to find its way, in all probability, by water to the re-fluery on the Jersey coast. Associated with him in the undertaking are Wil-liam H. Coolidge, Robert D. Evans and E. A. Clark, all of the United States Mining company.

MAMMOTH ORE SALES.

Nearly 300 Tons of Gold-Bearing Rock on Yesterday's Market.

The management of the Mammoth of Tintic appeared on the day's market with three lots of ore of good quality, the whole amounting to 278 tons. The controls on which the sales were made showed from \$13.20 to \$20 gold per ton, without reference to the silver, which maintained a position around three ounces. In addition to the ores disposed of yesterday the company has an #1er big lot in transit, and while the \$20,000 dividend is being dealt out on Spiember 15, a few more dollars will be added to the surplus. Director J. A. Cunningham, who has been looking into conditions, is very much pleased with them, and detects the resources. Tintic appeared on the day's market with

COMSTOCK'S REDIVIVUS.

What Electrical Equipment Will Do for the Historic Bonanzas.

Not for many months has there oc urred a deal that has excited greater incurred a deal that has excited greater interest in mining circles than that entered
into Saturday at San Francisco between
the mining companies on the Comstock
and the General Electric company for the
unwatering of the lower levels of the
Comstock mines, says the Gazette of Reno, Nev. It means that not only will there
be great improvements on the part of the
General Electric company, but that mining work about Virginia City will be stimulated and that work will be resumed on
a magnificent scale.

Manager D. C. Jackling of the Utah Copper company came in from the mines and mill at Bingham last night and will W. B. Mucklow, president of the Ma-estic company, has returned from its stic company, has returne

Jackson McChrystal, superintendent of the Gemini of Tintie, and under whose in-telligent effort ores of many millions have been won from the earth, left for camp again last night after a pleasant solourn with his family in California.

William A. Farish, a former general manager of the Majestic, is in Arizona, where he has valuable interests. Operations at the Mazepa shaft on Daly ground, Park City, have been temporarily

of the Ontario, Manager Rood said yes-terday that he could not intelligently say ust when the new mill would go into com-nission, although the waters are now be-ow the 1700-foot level.

The directors of the Tetro will meet Saturday, when, it is inferred, the regu-lar dividend will be posted, although it may be permitted to go over for the action of the shareholders, who will meet in an-nual session Monday next.

C. O. Ellingwood, secretary of the West-ern Exploration company, has gone to San Francisco to inquire into far West-

rn interests.

The farmers and smelter managers will neet to talk over the smoke issue at 10 clock this morning.

o clock this morning.

Tenopah Bonanza E. L. Mims & Co-have an option on the whole of Jim But-ler's interests at Goldfield, including his stock in the Sandstorm and Columbia Mountain mining companies, Rabbil springs water right and Columbia townstite company. A large amount of money is involved, but there is no question that this enterprising firm will benefit by its acumen in this transaction.

TO CURE DANDRUFF

It Is Necessary That the Dandruff Germ Be Destroyed.

"Destroy the cause, you remove the effect." Kill the germ that causes dandruff, falling hair and baldness, you will have no more dandruff and your hair must grow luxuriantly. Herpfelde not only cortains the dandruff germ destroy, er, but it is also a most delightful hair dressing for regular tollet use. No other hair preparation is on this scientific basis of destroying the dandruff germ and none other claims to be, for the simple reason that it is only recently that a destroyer of the germ has been discovered —Newbro's Herpfelde, the only hair preparation that actually kills dandruff. Sold by leading druggists. Send 10c in stamps for sample to The Herpfelde Co., Detroit, Mich.

GROUND FEED b oats & corn, & barley, carefully cleaned, then ground, is cheaper and better for horses than straight oats. Try it. Custom Feed Mills, \$20 So. \$rd West. Tel. \$61 PUSHING THE WORK.

Ore From "Flying Dutchman" Group to Be Shipped to Salt Lake.

Special to The Tribune. CALIENTE, Nev., Sept. 7 -- Joe French and Hiram Lester, owners of the Flying Dutchman group of gold-silver claims, lying north of Moapa, were in camp today buying provisions, and say they have taken out about forty tons of ore which will average \$12 gold and 70 ounces silver. As soon as their road is completed from the mines to the county read they will put on six more men and begin stoping ore from their 200-foot tunnel for immediate ship-ment to Salt Lake.

James Dickerman, formerly superintendent of the White Cloud group of mines, near Hot Springs Junetien, Ariz., passed through camp today with Nic Warner, owner of the Old Imperial group of copper claims north of Meapa. He will make a thorough examination of these claims for Berger & Wilkins, New York stockholders in the White Cloud Mining company. If the examination proves satisfactory they will take an option for \$12,000 cn the group.

Mr. Love, who is one of the owners of a large group of silver claims northeast of Callente, is in camp today on business connected with his claims.

Andrew Davis, owner of the Moonlight group of claims, south of Los Vegas, reports striking a five-foot ledge of \$67 ore, gold and copper, in a tunnel now in 140 feet. He will send samples to R. H. Officer & Co., Sait Lake assayers, for treatment. Mr. Davis recently sold the Los Vegas group of gold-copper claims in the same district to Berg & Strathmore of San Diego for \$6000 on one year's time.

R B Moson and Phil Dearborn, half-owners of free gold claims on the Virgin river, returned from Denver today, ac-companied by ex-judge Maxwell, who will accompany them to their mines and exam-ine the work completed character of ore aireay extracted and the contact, with the purpose of purchase, he being a third owner in the group.

Dick Woods and Hi Bentley, who located the Crystai Cave free gold mings on Virgin river in March, taking out several tons of ore going \$220 per ton and shipping it to Salt Lake for treatment, say that they have explored the strange cavern mentioned by The Tribune as having been found beneath the bottom of a forty-foot shart three weeks ngo, and find it fairly feet high and 200 feet long, its width varying from twenty to sixty-five feet. Their ledge, which disappeared when the "bottom fell out" of the shaft, has been found leading from the northwest end of the cave, but does not show up on the south side. The ledge is four feet wide in the cave and shows free gold and a malicable whitish metal, notther aliver nor les of which will be sent to Sal Lake for assay.

Mr. Manning, owner of the Buckeye group of copper claims north of Mogna, rays he has given an ortion on the group of sixteen claims to F. Aug. Heinze of Butte, through L. G. Fisher, his representative, who recently examined the mines, for \$20.600, of which one-tenth is payable Cetober 1, 1804, and the balance in two equal payments, January I and July 1, 1805. There is 400 feet of work completed on the claims. The ledges run from three to eighteen feet wids, with values of 9 to 26 per cent copper, which occurs in black oxide and ascurite, with occasionally native copper. There are about 200 tons of ore new on the various dumps. The contact is lime and spar in granite formation.

Louis Winters, an old Nevada prospector who returned from Collina, Mexico, in June, and has been prospecting up the Calorado river since that date, came through camp today with a sack of horn silver ore and manganese. He exhibited a curiosity in the shape of half a bird's nest fairly wound and twisted in which were long threads of native silver. Where the birds who built the nest obtained these strings of silver is unknown, but Winters says his ore contains many of those threads, which at the croppings probably became detached from the surrounding quartz by crosion and atmospheric changes.

Joe Gutbrie came up from Goode Springs today with a sack of samples of native copper ore taken from a sixty-foot shaft sunk on a four-foot ledge on his St. Louis claim, south of Goode Springs.

mining work about Virginia City will be stimulated and that work will be resumed on a magnificent scale.

Mining Notes.

Manager Charles W. Whiteley of the American Smelting and Refining company departed for Bingham yesterday morning to spend a day among his clients.

Manager D. C. Jackilng of the Utah Copper company came in from the mines and mill at Bingham last night and will leave for Colorado tomorrow.
